

## RECOVERING AMERICA'S WILDLIFE ACT WILL BENEFIT UNIVERSITIES AND RESEARCH

Our natural world provides innumerable benefits to human health and economic prosperity. As wildlife and their habitats disappear, these benefits are compromised. Nationwide, experts have identified more than 12,000 Species of Greatest Conservation Need., including over 1,300 here in Texas. The majority of these include at-risk fish and wildlife -- like the Texas horned lizard, Pronghorn, and American bumblebee.

Unfortunately, America lacks a dedicated funding stream to conserve vulnerable fish and wildlife. We are in danger of losing the ecological benefits of these species and the tremendous economic value of healthy ecosystems. The **Recovering America's Wildlife Act** offers an incredible opportunity to protect these species and their habitats throughout the country.

The Recovering America's Wildlife Act would provide \$1.3 billion per year to states, and \$97.5 million to tribal nations, from existing revenues to fund conservation, research, habitat restoration, outdoor recreation, and education programs. Of this, **Texas would be eligible for more than \$50 million per year** to implement the Texas Conservation Action Plan and help stabilize the at-risk fish and wildlife in our state.

### Good for wildlife. Good for business. Good for Texas.

Each state has completed a Wildlife Action Plan designed to help recover species in decline, helping to prevent the need for listing under the Endangered Species Act. The Recovering America's Wildlife Act would provide the funding needed to effectively implement these plans.

This legislation is supported by a wide range of business and conservation interests. Investing in preventative conservation helps avoid regulatory road blocks to development and industry, and the high costs of recovery when species become endangered. It would also fuel our booming outdoor recreation economy, and protect nature's benefits, such as clean rivers, pest control, and pollination services.

## A smart investment

The Recovering America's Wildlife Act represents an unprecedented opportunity to sustain the benefits of our natural world - water purification, food production, and our booming outdoor recreation industry. In Texas, outdoor recreation results in \$52.6 billion in annual consumer spending and generates 411,000 jobs.

The more than \$50 million per year in federal funds that Texas would be eligible to receive, coupled with a 25% match, would translate into new jobs, increased funding for conservation, support for habitat restoration, and numerous other benefits to Texas fish and wildlife.

Chase Fountain, TPWD

## Benefits to universities, researchers, and graduate students

- The bipartisan Recovering America's Wildlife Act would provide \$1.3 billion per year to states nationally, including more than \$50 million to Texas, to advance research and conservation of at-risk fish and wildlife through implementation of State Wildlife Action Plans. University researchers will be at the forefront of projects funded.
- The additional funding will fuel available jobs and internships for students and new graduates at universities, consulting firms, non-profit organizations, and other employers.
- Increased funding will facilitate fruitful, long-lasting partnerships with landowners, nonprofit organizations, land trusts, state agencies, private industry, and other research institutions.
- Increased funding for non-game wildlife programs will allow for broader opportunities to address species or issues that have traditionally been neglected.
